What is the Internet Computer

The Internet Computer adds autonomous serverless cloud functionality to the public internet – making it possible to build almost any system or service entirely on a decentralized network using “canister software,” an evolution of smart contracts.

ICP Token

AirBit

**ICPSwap**

ICPSwap is DEX built completely end-to-end on-chain. By building the ability for anyone to swap tokens through ICPSwap leveraging the Internet Computer blockchain as the high-speed, scalable, low-cost infrastructure makes ICPSwap a first-to-market in the growing Internet Computer DeFi ecosystem.
